

Authentise Frontend Coding Challenge

This brief coding challenge is designed to give you an opportunity to showcase what you know about frontend development and React. The project is meant to take a few hours or less to complete. Feel free to use resources online to help!

Requirements

- The webpage should use the **Dog CEO API (found at dog.ceo)** to display a random dog image
- There should be a button to allow the user to see a new image
- The webpage should be written using React
- Add your project to Github and send us the link (remember to include a README.md with instructions on how to run the app!)

Hints and Additional Notes

- “Create React App” can get you started
- Axios or Ajax can help you fetch the random dog image
- Bonus points if you use lodash somewhere in the application
- Make the page appealing and user-friendly
- It’s nice to include a React UI library (React Bootstrap and Material UI are a few examples)
- Show off your knowledge of React hooks, if you want!
- Add any additional features you want
